AN
INTERNSHIP REPORT
ON

“Storemyresults”

Bachelor of Engineering

**In
Computer Science and Engineering**

Submitted by: ARPITHA G (1JT18CS012)

**JYOTHY INSTITUTE OF TECHNOLOGY
2021**

ABOUT THE COMPANY

The race for digital transformation is on. In this globally connected on-demand world with rapid advancements in internet technologies, businesses worldwide are under constant pressure to add innovative real-time capabilities to their applications to respond to market opportunities.

Every business worldwide is building event-driven, real-time applications - from financial services, transportation, and energy, to retail, healthcare, and Gaming companies.

Our endeavour is to make it easy to develop innovative real-time applications and efficient to operate them in production.

We have a proven record of building highly scalable, world-class consulting processes that offer tremendous business advantages to our clients in the form of huge cost-benefits, definitive results and consistent project deliveries across the globe.

We prominently strive to improve your business by delivering the full range of competencies including operational performance, developing and applying business strategies to improve financial reports, defining strategic goals and measure and manage those goals along with measuring and managing them.

We are committed to going the extra mile to bring success to the clients consistently

We are dedicated to delivering the right people, solutions, and services to the clients that they require to meet their technology challenges and business goals.

Optimizing client satisfaction with quality services

Delivering the most efficient and the best solution to our clients to every client leveraging leading technologies & industry best practices.

OVERVIEW OF THE PROJECT

Project Name: Storemyresults

Team Members: ARPITHA G

ANUSHREE G

KEERTHANA M

VAISHNAVI RAO

This project is based on Web Development And its Applications. The main objective of this project is to learn the implementation of HTML, CSS, JavaScript and MySQL. The basic webpage of this project is created using HTML and styling of the webpage is done using CSS. JavaScript is used for creating web pages and makes responsive design easier.

This webpage is about one of the greatest companies of all time

Storemyresults.com

ABOUT STOREMYRESULTS

Search engine results pages are web pages served to users when they search for their results using a search engine, such as Google. The user enters their University Seat Number (USN), upon which the search engine presents them with their results.

storemyresults.com, in this web page the candidates should enter their USN to view their results, after viewing the results, the candidates can save and download the results sheet.

The web page can also be accessed by the graduates by entering their USN and can download the result sheet.

storemyresults.com basically contains the results of candidates and they can download and save the PDF.

Student report generator is a web based application designed and engineering colleges that need to manage results across multiple branches students that need to track, manage and report results. This application can run on any kind of operating system. At a time we can see all the years result in a single sheet and we can see the individual candidate's results separately.

Uses of Storemyresults.com

Faster Results

This is the most obvious advantage of exam result management . Generally, the traditional paper-based result management system takes time as the teachers need to collate the results, manually calculate, input it into the system and wait until the reports are then printed.

This system can take up weeks – during which times the students have forgotten the context and the content of the exam questions.

However, with an online system, the test results are calculated automatically and then results are ready to view or email within minutes.

Error Free Results

For many teachers, the examination period also is a time of stress and anxiety. This is because of the tiresome process of manually collecting the results, marking them, converting the marks into grades, and keeping them safe until the day the parents (or students) get to see them.

One of the biggest downsides of the traditional form of result management, it that this entire system is prone to human errors and miscalculations. While handling the manual exam papers, there is also a high chance of losing them, or damaging them due to unforeseen environmental situations.

However, the online result management system eliminates all these problems. The automatic calculation and storage of the exam results reduces the burden on the educators and saves the results from any human errors or damages.

It Motivates Students And Gives Them An Accurate Indication Of Their Academic Performance.

The immediate results not only help to reduce the stress of the students waiting for their results. When they do receive their marks and scores, the faster results also help the students to realize their errors, work on relearning their concepts, and seek improvement before their next text.

The online system is able to generate an analytical report of the student's performance. This report can give the teachers and the parents an accurate understanding of the strengths and weaknesses of the child, their academic interests, and the topics on which they might need additional tutoring.

TOOLS USED

Software Requirements

- Visual Studio Code 2019.
- Google Chrome or Microsoft Edge of latest version.
- Front End: HTML, CSS, JS
- Back End: MySQL
- Linux 7.1 or Windows XP/7/8/10 OS or Mac OS

Hardware Requirements

- Pentium 200-MHz computer with a minimum of 64 MB of RAM (128 MB of RAM recommended).
- Monitor with a refresh rate of at least 40Hz for a smooth GUI experience (optional).

IMPLEMENTATION

<h2><BOLD>3.It Motivates Students And Gives Them An Accurate Indication Of Their Academic Performance.</BOLD></h2>

<P><h3>The immediate results not only help to reduce the stress of the students waiting for their results.

When they do receive their marks and scores, the faster results also help the students to realize their errors, work on relearning their concepts, and seek improvement before their next text.

The online system is able to generate an analytical report of the student's performance.

This report can give the teachers and the parents an accurate understanding of the strengths and weaknesses of the child, their academic interests, and the topics on which they might need additional tutoring.</h3></P>

<h2><BOLD>4.Bias-Free Checking Of Marks</BOLD></h2>

<P><h3>The lack of human intervention in the online result management system ensures that the student results are free from personal biases and prejudices.

Most often, these biases can creep in unknowingly, but they affect the marks and the morale of the student.

On the other hand, the online result management system is free from any such biases towards any student.

Student report generator is a web based application designed and engineering colleges that need to manage results across multiple branches students that need to track, manage and report results.

This application can run on any kind of operating system.

At a time we can see all the years result in a single sheet and we can see the individual candidate's results separately.

YELLAMMA DASAPPA INSTITUTE OF TECHNOLOGY	1YD

The screenshot shows the 'About' page of storemyresults.com. The page features a blue background with a white text box containing the following content:

Benifits of storemyresults.com

- 1.FASTER RESULTS**
This is the most obvious advantage of exam result management . Generally, the traditional paper-based result management system takes time as the teacher manually calculate, input it into the system and wait until the reports are printed. This system can take up weeks – during which times the students have to wait for the content of the exam questions. However, with an online system, the test results are calculated automatically and then results are ready to view or email within a few minutes.
- 2.ERROR FREE RESULTS**
Many teachers, the examination period also is a time of stress and anxiety. This is because of the tiresome process of manually collecting the results, marking them into grades, and keeping them safe until the day the parents (or students) get to see them. One of the biggest downsides of the traditional form of result management system is prone to human errors and miscalculations. While handling the manual exam papers, there is also a high chance of losing them, or damage to the papers in environmental situations. However, the online result management system eliminates all these problems. The automatic calculation and storage of the exam results by the system saves the results from any human errors or damages.
- 3.IT MOTIVATES STUDENTS AND GIVES THEM AN ACCURATE INDICATION OF THEIR ACADEMIC PERFORMANCE**
The immediate results not only help to reduce the stress of the students waiting for their results. When they do receive their marks and scores, the faster they can realize their errors, work on relearning their concepts, and seek improvement before their next test. The online system is able to generate an analysis report for each student.

The screenshot shows a web browser window with the address bar displaying 'storemyresults.com' and the file path 'C:/Users/hp/Desktop/storemyresults/ABOUT.HTML'. The website header features the 'storemyresults' logo and a navigation menu with 'Home', 'College Code', and 'About'. The main content area has a blue background with a textured pattern. It includes a section titled '4. BIAS-FREE CHECKING OF MARKS' with a paragraph explaining the system's fairness. Below this is a section titled 'How to use storemyresults.com' with a bulleted list of instructions.

storemyresults Home College Code About

4. BIAS-FREE CHECKING OF MARKS

The lack of human intervention in the online result management system ensures that the student results are free from personal biases and prejudices. Most unknowingly, but they affect the marks and the morale of the student. On the other hand, the online result management system is free from any such bias. The report generator is a web based application designed and engineering colleges that need to manage results across multiple branches students that need to t. This application can run on any kind of operating system. At a time we can see all the years result in a single sheet and we can see the individual candidate

How to use storemyresults.com

- ❑ Search engine results pages are web pages served to users when they search for their results using a search engine, such as Google. The user enter (USN), upon which the search engine presents them with their results.
- ❑ storemyresults.com. In this web page the candidates should enter their USN to view their results, after viewing the results, the candidates can save and d
- ❑ The web page can also be accessed by the graduates by entering their USN and can download the result sheet.
- ❑ The web page can also be accessed by the graduates by entering their USN and can download the result sheet.
- ❑ storemyresults.com basically contains the results of candidates and the candidates can download the same.

This screenshot shows the same website but scrolled down to the 'About CST' section. The header and navigation menu are identical. The main content area continues with the blue textured background. It features a section titled 'About CST' followed by 'COMPSOFT TECHNOLOGIES PROVIDING A COMPLETE SUITE OF IT SERVICES' and a paragraph describing the company's mission and services.

About my TEAM

VAISHNAVI RAO executed the code in appropriate format using all the tags to create the website and was successful in creating the JavaScript.

ANUSHREE G searched the information about the student result and created JavaScript

ARPITHA G took part in coding corrections and helped in providing information and pictures, backend code and JavaScript.

KEERTHANA M Suggested the Idea of the website and involved in coding part and created Backend.
